AppNexus
Technology Pvt Ltd

Appnexustech Mobile App Development

Building custom Android or iOS applications is our passion. Our successful and experienced developers will make sure that your idea comes alive and works just as you imagined.

We are flexible and agile, and it doesn't matter in what range of industry your company is - we can provide you with a needed app.

1.

Strategy

Our development process starts with defining the strategy for evolving your idea into a successful app.

3.

UI/UX Design

The third step is one of the most important ones - UX/UI design. Creating a pleasing design and user experience for everyone interacting with your app is a must.

5.

Testing

QA (Quality Assurance) testing takes place once we have a finished version 1.0. This process makes the application stable, functional, and secure.

2.

Analysis and Planning

We analyze the client's needs, competition, and market, after which we move on to the detailed development plan.

4.

App Development

Our next step is following our plan and building the app while connecting all the necessary segments of the application (back-end/server technology, API(s), and the mobile app front-end).

6.

Deployment & Support

After testing performance, security, and how the app works on different device platforms, we are ready for the best part - deploying and continuing support.
